

Product Owner for Sprint 1 : Advait Burde (aburde)

Product Owner for Sprint 2 : Anush Baskaran (abaskara)

Product Owner for Sprint 3: Tong Fu (Tony)

### **Sprint 1 Features:**

1. User Registration and Login:
  - The Registration form will consist of username, email, first and last name, password and confirm password fields.
  - A confirmation link will go out after successful registration. The User can login after confirming their email via the link.
2. User Profile:
  - The user can edit username, first name, last name and change password.
3. User Dashboard:
  - The list of high level categories will be displayed to a new user using a FAB. The user can click on one of them and fill a form related to that category.
  - The Dashboard will display the tasks currently in progress. For sprint 1 the data will be displayed without using d3.js. There will not be any detailed data analytics on the dashboard for this sprint.
  - There will be tabs on the dashboard for each category of tasks for ease of navigation.
  - The user can start, post or delete a task from the dashboard. These will be through direct post request but later will occur through Ajax.
4. Subtasks Page:
  - The subtasks page will display the details of all tasks within a particular high level category. For example, this page could list all subtasks (assignments, project etc) related to the course Web Apps. Similarly, it could also list all subtasks related to a particular research topic. Details will be displayed without d3.js.
